Supercharge data
protection and business
continuity with
BackupNXT

Data volumes across organizations are exploding at a rapid pace. Innovative, cloud-based backup solutions can help maintain business continuity, protect your valuable business data and safeguard critical assets from any possible security threats or failures. This is why more enterprises are seeking modern backup solutions.

Data (both structured and unstructured) is growing at a CAGR of 21.2% and will reach 221 zettabytes by 2026.

Source: IDC

Key challenges with legacy backup tools

- Absence of modern workload protection and scalability
- Increased total cost of ownership (TCO) due to inefficient backup strategies
- Lack of centralized management and compliance leading to opaque backup landscape and lapses in data availability

BackupNXT: Supporting heterogeneous workloads with unified management

HCLTech's BackupNXT is an end-to-end offering aimed at transforming the customer's data backup landscape. The consulting-led offering enables the assessment, building, migration, management and operations of the entire backup environment. This enables

customers to protect their legacy and modern workloads while maintaining the robustness and simplicity of operations. This further allows enterprises to gain a unified control over their data protection landscape, thus preventing data loss.

BackupNXT overview

Consult and assess

- Identify and assess existing landscape and proposed solution scalability
- Identify mission critical workloads, non-contained data and to-be protected data
- Discover backup landscape and determine backup data tiering
- Analyze security posture of customer, current risk, data protection strategies and policies
- Analyze compliance and SLA requirements
- Determine retention goals and requirements

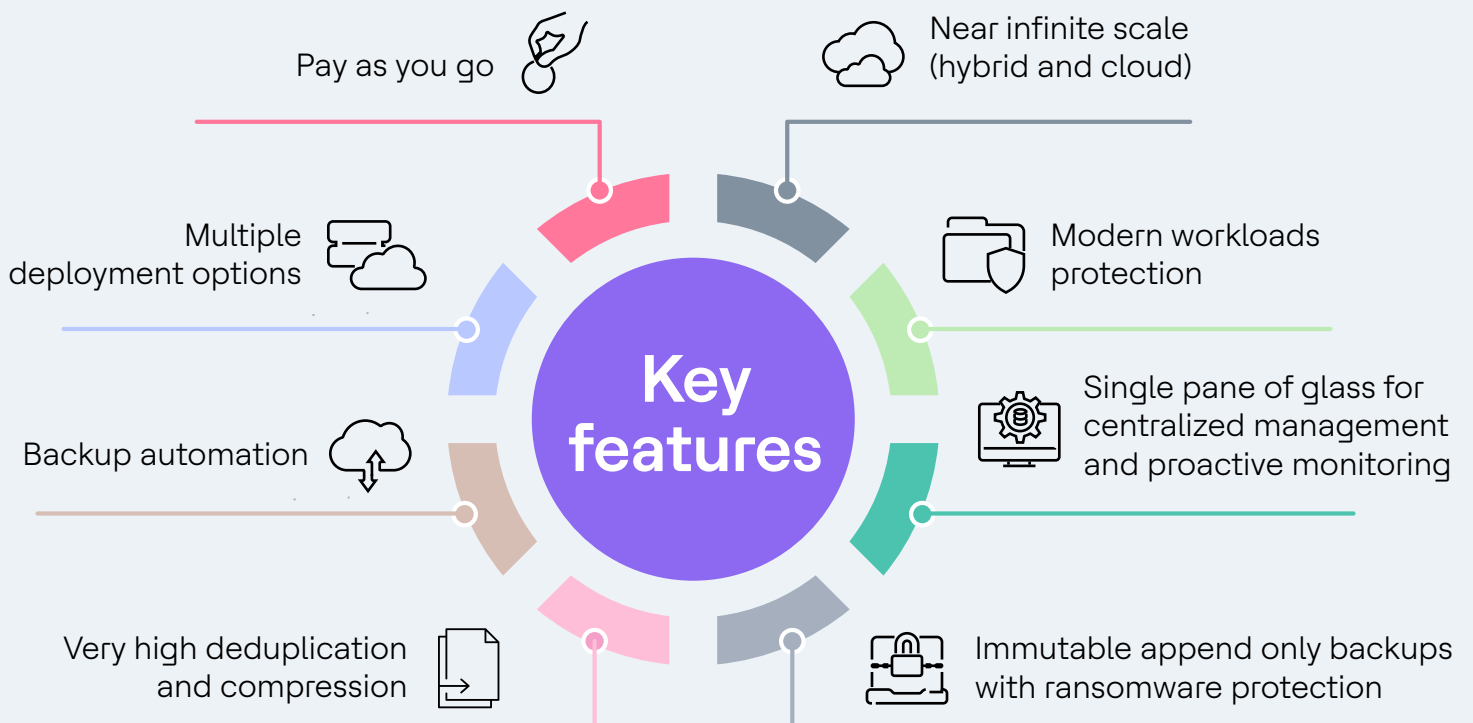

Build and migrate

- Determine solution approach, design and deployment models
- Select the best-fit tool
- Determine and implement data protection and retention policies
- Build a backup infrastructure and automate backup workflows tasks to protect data
- Setup monitoring, alerts, reporting and compliance checks
- Migrate or extend workloads to new landscape

Operate and manage

- Monitor backup workflows
- Perform limited restorations (if read)
- Ensure customer SLA adherence
- Perform and validate test cases

Benefits

- Supports heterogeneous deployment models
- Automated management along with a failure proof design
- Adherence to best practices to achieve storage optimization
- Aids scalable architecture
- Assured SLA commitment
- Helps achieve optimized TCO by providing flexible commercial models

Success stories

Enabled a US-based healthcare system provider reduced their total cost of ownership (TCO)

A substantial optimization in total cost of ownership due to a reduction in human efforts provided better dedupe and compression ratios and out-of-the-box features like Instant Mass Restore, Index Search and Large VM Backups.

Reduced technology debt for the third largest wireless network operator in the US

Significant reduction in backup software license cost, followed by reduced human efforts, consolidated solution for protecting modern workloads along with support for traditional workloads..

Why HCLTech

1. Leader in all major analyst reports for various cloud service evaluations (IDC, Everest Group, ISG, Avasant and Gartner)
2. Over 20 years of experience working with and managing backup solutions
3. Dedicated center-of-excellence lab to offer pre-validated solutions
4. Flexible pay-per-use model
5. Established partnership with industry-leading OEMs
6. Highly customizable solutions based on robust assessments
