Conference, October 3-5, 2023

Power Apps Copilot Demo

New Copilot capabilities are making it even easier for power users to create Dataverse-enabled Power Apps. But with this newfound ease, it's crucial that you have a governance structure in place using Microsoft's CoE Starter Kit to manage and secure Power Platform's growth in your organization. In this demo, we show you how citizen developers can take the steering wheel in driving app production without compromising the security provided by well-defined guardrails.

Visitor Sign-in Canvas App Demo

Power Apps can be easily connected to powerful AI capabilities in cognitive services to perform time-saving tasks like image classification, text analysis and more. This demo walks through visitor intake, approval and sign-out using a simple canvas app.

SAP Surround Demo

Customizing and streamlining processes in SAP is costly and challenging. However, using Power Platform's connectors and low-code capabilities, it's possible to provide mobile-enabled SAP-connected user experiences in just weeks instead of the typical development period of months.

Come visit us at Booth #320 to see these demos in action!
