

Empowering seamless IT transition with HCLTech DeMergeIT

With the changing business and economic demand, organizations are seeking divestment as a viable strategy to focus on their core competencies, generate capital, or reduce the risk associated with an underperforming business segment. In any divestiture process, IT separation is a critical aspect as it involves the separation of different IT systems, applications, and infrastructure from a parent entity to a separate entity.

Customer challenges in IT separation

Divestiture involves challenging and complex tasks such as data migration, application separation, server and storage separation, and IT infrastructure separation, among others. Following are the key challenges that they face with divestiture:

- Selecting the right technology and reducing cost
- Maintaining business continuity
- Data compliance and software licensing issues
- Functional dependencies between shared entities and tools
- Myopic vision of the target state and disparate architectures
- Selecting the appropriate hosting strategy and process standardization
- Workforce challenges

HCLTech DeMergeIT: Comprehensive IT separation solution for myriad IT challenges

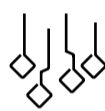

HCLTech DeMergeIT offering helps customers understand and create an IT separation strategy, undertake detailed separation planning, and enables them to carry out timely execution of the plan.

Solution for different areas and needs

Hybrid cloud

Provides services including SDI, Cloud financial management, private cloud solutions, information management, and modern PaaS adoption on any infrastructure.

Data migration

Enables seamless migration of data between different databases, ensuring data consistency and security by leveraging migration factory models, IPs and accelerators.

Digital workplace

Creates a unique employee experience for the new entity's workforce after a divestiture, focusing on remote work, productivity, security, and user experience.

Networks

Enhances network transformation and service operations, including network lifecycle automation, SDN, and SD-WAN for quick separation.

Cybersecurity

Provides Managed Services, Strategy Consulting and architecture and Transformation and Integration, helping customers identify and mitigate risks at an early stage of divestiture.

Service orchestration

Offers guidelines, workflows and built-in business logic for seamlessly moving a supplier's existing dependencies to a new supplier during divestiture.

Key benefits

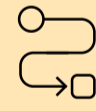

Cost-optimized solution

App rationalization and technology modernization

Security compliance

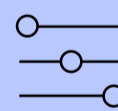

Seamless end-user migration

Quick solution delivery

Fast and efficient contracts

Seamless transition

Technical debt reduction

Building an efficient IT organization

Service augmentation

Unified business processes and IT view

TSA exit services within stipulated timelines

HCLTech differentiator

- Comprehensive M&A and divestiture solution layered with best practices, tools and framework
- Cloud assessment and migration factory for driving cloud adoption
- Large pool of MA&D experts including SMEs, IT experts, strategy consultants, program experts etc.
- Robust solution catalogue with 10+ tools, 30+ accelerators, 20+ re-usable templates and checklists
- Ability to advise to execute: Well-defined divestiture framework
- Well-defined matrix of key activities and deliverables across towers like Hybrid Cloud/DC, Network, Cybersecurity, ITSM, SIAM and end-user computing
- Cross-functional teams with M&A experience with industry knowledge to propose business solutions
- Tribal knowledge about the customer environment and their presence in infrastructure, security, and other areas
